Profile

Graduate of Computer Engineering. Possess strong skills in Angular 7(TS), Angular Material, Bootstrap, Nebular. Implemented end-to-end AES Encryption. I have worked on few projects related to front end and back end using Angular, MEAN Stack, VUE js, and Nuxt js. My future goal is to work on react.js, Django and machine learning AI if i get opportunity.

Projects

EWEBPAY (Freelance Project)

Its a online paying app which has multiple billing options i.e (Google-pay, Apple-pay, Cash-app Check, Credit Card, Gift Card). It's Front-end is build using **Anuglar 8** and Back-end was on **Python** with **PostgreSQL** database. It stores all types of billing data of user in one place and user can keep track of his/her transactions of all different billing accounts in one place.

My Web WhatsApp

It's basic copy of web whatsapp using **MEAN Stack**. It has all the basic functionalities of Web Whatsapp for example Real-time messaging, Real-time user image update, image upload, creating groups of 2 or more user at time, maintaining messages of same user of in different chat groups and not mixing up.

Refav (Freelance Project)

Its a social website called Refav which build using **Angular 7**, where users can post their favorite list i.e (video, audio, books, news, food, places, sports, fashion & etc.) which can furthre be categorized into sublists. Users can post their favorite lists or like others post or reshare the same post with different items of list but with same list title.

Work Experience

2020-Dec to Present

Stack-Tech

Front-End Web Developer

Currently, I'm doing an internship at **Stacktech**, for about 2 months. I 'm managing 2 apps (**Savah app**, and **Courier service app**). The technology we are using is **Vue Js** and **Nuxt js** respectively with **Tailwind** and **Bootstrap**. and many plugins like **Masonry**, **Dropzone**, **Tribute**, **Multiselect**, **Ripple**, and many more. Prior to that, I was a freelancer and had experience in **Angular 7** with **Angular Material** and **RXJS**.
